6LoWPAN is a wireless / IoT style standard that has quietly gained significant ground. Although initially aimed at usage with IEEE

802.15.4, it is equally able to operate with other wireless standards making it an ideal choice for many applications.

6LoWPAN uses IPv6 and this alone has to set it aside from the others with a distinct advantage.

6LoWPAN is an acronym of IPv6 over Low -Power Wireless

Personal Area Networks.

6LoWPAN is the name of a concluded working group in the Internet area of the IETF. The 6LoWPAN concept originated from the idea that "the Internet Protocol could and should be applied even to the smallest devices," and that low-power devices with limited processing capabilities should be able to participate in the Internet of Things. The 6LoWPAN group has defined encapsulation and header compression mechanisms that al 6LoWPAN by Zach Shelby (ebook) - eBooks.com 6LoWPAN: The Wireless Embedded Internet is an invaluable reference for professionals working in fields such as telecommunications, control, and embedded systems.
