An animal cell will typically range between 10 and 30 micrometers in length, while a plant cell can reach 100 micrometers in length. Plant cells are larger because they contain vacuoles that store water. Animal cells also have vacuoles, but these organelles aren't used to store water. The cell wall is another important difference. Animal cells are protected by a cell membrane.

cell vocabulary Flashcards and Study Sets | Quizlet

cell theory, which is a unifying concept of biology. The cell theory has three major principles: • All organisms are made of cells. • All existing cells are produced by other living cells. • The cell is the most basic unit of life. All cells can be divided into two major groups: prokaryotic cells or eukaryotic cells.
