Authored by two leading researchers in the athletic training field, the Second Edition of Therapeutic Modalities: The Art and Science provides the knowledge needed to evaluate and select the most appropriate modalities to treat injuries. The authors use an informal, student-friendly writing style to hold students' interest and help them grasp difficult concepts. The unique approach of the text teaches aspiring clinicians both the how and the why of therapeutic modality use, training them to be decision-making professionals rather than simply technicians. The Second Edition is revised and expanded to include the latest research in therapeutic modalities. New material has been added on evidence-based practice, and other areas, such as pain treatment, are significantly expanded. It retains the successful format of providing the necessary background information on the modalities, followed by the authors' "5-Step Application Procedure." New photos, illustrations, and case studies have also been added.

In December 2010, WHO first recommended the use of the Xpert MTB/RIF assay. The WHO's policy statement was supported by a rapid implementation document, which provided the technical "how-to" and operational considerations for rolling out the use of the assay. An unprecedented uptake of this new technology followed the release of WHO's policy: by the end of March 2014, more than 2,300 GeneXpert instruments and more than 6 million Xpert MTB/RIF cartridges had been procured in the public sector in 104 countries eligible for concessional prices. An Expert Group was convened by WHO in May 2013 to review the current body of evidence on use of Xpert MTB/RIF. The resulting recommendations from the Expert Group are included in the WHO Policy update, which widens the recommended use of Xpert MTB/RIF, including for the diagnosis of paediatric TB and on selected specimens for the diagnosis of extrapulmonary TB, and includes an additional recommendation on the use of Xpert MTB/RIF as the initial diagnostic test in all individuals presumed to have pulmonary TB. The accompanying Xpert MTB/RIF implementation manual has been developed to replace the first edition and takes into consideration the current body of evidence and operational experiences available, in the context of the Policy update.
